PROFESSIONAL SUMMARY

Final-year B.Tech CSE student and Full Stack Developer (Node.js, PostgreSQL, React) who ships production-grade applications. Engineered PactPay, an AI-powered escrow platform featuring an append-only ledger, strict state machines, and human-in-the-loop AI payment reviews. Seeking Full Stack and Software Engineering roles at product companies.

TECHNICAL SKILLS

Languages: C++, JavaScript

Frontend: React.js, Redux Toolkit, Tailwind CSS, shadcn/ui, Vite, React Router

Backend: Node.js, Express, REST API design, JWT, OAuth

Databases: PostgreSQL, Prisma, MongoDB

AI & Payments: Razorpay (signature verification, idempotency), Google Gemini AI

Tools & Infra: Docker, BullMQ, Redis, Git, GitHub, Cloudinary

EXPERIENCE

Web Support Intern (Frontend Development) — KallTrip Pvt Ltd

Jun 2025 – Oct 2025

- Shipped 60+ pages of TeyZeeVisas frontend, resolving cross-browser inconsistencies to deliver a uniform user experience.
- Built OAuth-based Google Calendar integration for a salon booking platform, automatically syncing bookings and eliminating manual scheduling entry.
- Maintained 99% uptime across live production environments through proactive debugging and monitoring.

PROJECTS

PactPay — AI-Powered Escrow Platform | [Live Demo] | [Github] *Node.js, Express, PostgreSQL, Prisma, BullMQ, Razorpay, Gemini AI, React*

- Engineered an append-only ledger with idempotency keys and ACID transactions across all payment endpoints, eliminating double-spend and race-condition risk while guaranteeing full audit traceability.
- Designed strict state machines for contracts and milestones; integrated Gemini AI as an asynchronous BullMQ worker that reviews milestone submissions and returns a recommendation — payment release always requires explicit human confirmation, never triggered by AI alone.
- Built a ghost-detection background job that auto-resolves inactive milestones after 14 days of counterparty silence, removing the need for manual intervention on stalled contracts.
- Integrated Razorpay with server-side signature verification and idempotency handling, closing common webhook-replay and duplicate-charge attack vectors.
- Built the full React frontend (Tailwind CSS, shadcn/ui, Framer Motion) covering the entire escrow flow: create, fund, submit, approve, release.

TeyZeeVisas — Live Visa Services Platform | [Live Demo] | *HTML, CSS, JavaScript, Google Apps Script*

- Shipped a production application spanning 60+ pages with consistent, fully responsive UI/UX across devices.
- Automated data sync and email notifications via Google Apps Script, cutting manual administrative work for the operations team.

HireFlow — Full-Stack Career Platform | *MongoDB, Express, React, Node.js, Redux Toolkit*

- Architected a full-stack job platform with Role-Based Access Control (RBAC) separating candidate and recruiter workflows with JWT-driven session management.
- Implemented Redux Toolkit for global state management, centralizing asynchronous application states and image payload pipelines via Cloudinary.
- Optimized MongoDB schema design and query patterns for fast job searches and filtered applicant retrieval.

EDUCATION

B.Tech in Computer Science — I.K. Gujral Punjab Technical University, Punjab *2023 – 2027*

- GPA: 8.38/10 • Ranked 1st in Department (1st & 4th semesters)
- Relevant Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, OOP

ACHIEVEMENTS & LEADERSHIP

- **Technical Proficiency:** Solved 200+ Data Structures and Algorithms problems on LeetCode and GeeksforGeeks (C++).
- **COPE Peer Support Group (Co-Lead):** Completed a 7-day Mental Health First Aid (MHFA) certification and directed an MPower-backed campus initiative, organizing live community events — including open mics — to actively deliver mental health resources to the student body.
